

## **Educational Outcomes:**

By graduation, TUSPM students must demonstrate the following:

1. The ability to apply current and emerging knowledge of human structure, function, development, pathology, pathophysiology, and psychosocial development to patient care. The knowledge obtained provides a foundation in clinical training, residency training, and practice in podiatric medicine.
2. The ability to provide effective and compassionate patient-centered care (with emphasis on the lower extremity) that promotes overall health to diverse populations. Exhibit cultural awareness to ensure that the patient and the patient's family are provided the highest quality of care that demonstrates respect for diverse cultures.
3. The ability to apply scientific methods and utilize clinical and translational research to further the understanding of contemporary podiatric medicine and its application to patient care.
4. Communication and interpersonal skills that result in relevant and professional information exchange and decision-making with patients, their families, and members of the healthcare team.
5. The highest standards of competence, ethics, integrity, and accountability. Place the patient's interest above oneself.
6. The ability to work as an effective member of a health-care team.
7. Understanding of common societal problems (e.g., issues of addiction or abuse) and their impact on patients and their families.
8. The skills and motivation to acquire and assimilate information independently to be lifelong learners.
9. The skills and mindset to learn from experience and become reflective practitioners.
