Why Choose Podiatric Medicine

One of the best characteristics about Podiatric Medical School is being taught by physicians that are in the clinic and operating room daily. It's amazing to hear why every detail matters and that each case is unique.

- Attention to detail is everything! It's knowing all 122 ligaments, 26 bones, the joints and what makes each one unique.
- DPMs perform surgery, administer medications and prescribe physical therapy regimens.
- Podiatrists may practice a subspecialty such as sports medicine, orthopedics, pediatrics, dermatology, radiology, geriatrics, or diabetic foot care.
