

Educational Outcomes (Revised 2014)

By the time of graduation, students at the Temple University School of Podiatric Medicine will demonstrate competence in the following:

1. Knowledge of the pre-clinical sciences which provide the foundations of podiatric clinical training, residency training, and practice.
2. Prevention, diagnosis, and management of diseases and disorders of the lower extremity in a cost effective manner.
3. Assessing medical conditions that affect the lower extremity and referring, as appropriate, those patients with conditions identified during the evaluation.
4. Practicing with professionalism, compassion, and concern and in an ethical fashion regardless of the patient's social class, gender, racial, or ethnic background.
5. The ability to communicate and work collaboratively with others and to function in a professional manner in an interprofessional setting.
6. Practice and manage patient care in a variety of communities, healthcare settings, and living arrangements.
7. Understanding of podiatric practice in a multitude of health-delivery settings.
8. Understanding of research methodology and other scholarly activities.
9. The ability to acquire, assimilate, and evaluate information relevant to professional activities in order to engage in self-directed life-long learning.
10. The ability, insight, and self-awareness necessary to learn from experience and become reflective practitioners.
